

TEST REPORT (SVHC)

Applicant : Hebei CangChen Imp. & Exp. Trade Co., LTD.
8-8-3-802 Room, Guoruiyuan Building, Southwest Corner of the Intersection
Address : of ShengLi North Street and Yitang Road, Chang'An District, Shijiazhuang
City, Hebei Province, China.
Manufacturer : Hebei CangChen Imp. & Exp. Trade Co., LTD.
8-8-3-802 Room, Guoruiyuan Building, Southwest Corner of the Intersection
Address : of ShengLi North Street and Yitang Road, Chang'An District, Shijiazhuang
City, Hebei Province, China.

The submitted sample and sample information was/were submitted and identified by/on the behalf of the client

Sample name : Alumina Ceramic Foam Filter
Sample Model : Customization
Brand Name : N/A

TEST INFORMATION

Date of Receipt : 2023-10-07
Date of Test : 2023-10-07 to 2023-10-13
Date of Issue : 2023-10-13
Test Method : Please refer to the following page(s).
Test Result(s) : Please refer to the following page(s).

Test Requested : As requested by client, SVHC screening is performed according to:
(i) Two hundred and thirty-five (235) substances in the Candidate List of
Substances of Very High Concern (SVHC) for authorization published by
European Chemicals Agency (ECHA) on and before Jun. 14, 2023 regarding
Regulation (EC) No 1907/2006 concerning the REACH.

Summary

According to the specified scope and analytical techniques, concentrations of tested SVHC are $\leq 0.1\%$ (w/w) in the submitted sample. **PASS**

Test/Witness Engineer :

Approved & Authorized :

Andy Zhang

**Sample as received are classified as below categories:**

Description
Alumina ceramic

Remark:

1. Definition of classification is listed in **Appendix A** of this report in accordance with 67/548/EEC and Regulation (EC) No. 1907/2006

Test Method:

1. Acid digestion and analyzed by ICP-OES;
2. Solvent extraction and analyzed by GC/MS and GC/ECD.

Remark:

1. The chemical analysis of 235 SVHC is performed by means of currently available analytical techniques against the list published by ECHA on Jun. 14, 2023.

(refer to) <http://echa.europa.eu/web/guest/candidate-list-table>

2. In accordance with Regulation (EC) No. 1907/2006, any producer or importer of articles shall notify ECHA, in accordance with paragraph 2 of Article 7, if a substance meets the criteria in Article 57 and is identified in accordance with Article 59(1) of the Regulation, if (a) the substance is present in those articles in quantities totaling over one tonne per producer or importer per year; and (b) the substance is present in those articles above a concentration of 0.1% weight by weight(w/w).

3. Article 33 of Regulation (EC) No. 1907/2006 requires supplier of an article containing a substance meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1% weight by weight(w/w) shall provide the recipient of the article with sufficient information, available to the supplier, to allow safe use of the article including, as a minimum, the name of that substance.

4. If a SVHC is found over the reporting limit, client is suggested to identify the component which contains the SVHC and the exact concentration of the SVHC by requesting further quantitative analysis from the laboratory.

**Test result: (Substances in the Candidate List of SVHC)**

NO.	Substance Name	EC No.	CAS No.	Concentration (%)	RL (%)

**Remark:**

1*. Calculated concentration of cobalt dichloride is based on the identified cobalt by ICP-OES and the identified chloride by IC method.

Calculated concentration of diarsenic pentaoxide, diarsenic trioxide, lead hydrogen arsenate and triethyl arsenate are based on the identified heavy metal result (i.e. Arsenic, Lead)

Calculated concentrations of sodium dichromate are based on the identified sodium by ICP-OES and the identified chromium (VI) by spectroscopic method. The test result is reported as sodium dichromate (CAS number 10588-01-9). Please note that sodium dichromate dehydrate (CAS number 7789-12-0) is no longer classified as SVHC according to the latest amendment of 67/548/EEC (31th Adaption to Technical progress).

Calculated concentration of bis(tributyltin) oxide TBTO is based on the identified tin by ICP-OES and confirmed by TLC.

Identity of above metal substances present in the article has to be further confirmed.

RL is evaluated for element (i.e. tin, cobalt, chloride, arsenic, lead, sodium, chromium (VI) respectively)

2. N.D. = Not detected (lower than Reporting Limit)

3. RL = Reporting Limit

4. All RL is based on homogenous material

For any parameters involving confirmation test, the RL will be 0.05%

5. In case SVHC <0.1% for articles “No further obligations regarding communication along the supply chain or notification emerge from the analytical findings in the tested sample”

In case SVHC >0.1% for articles “Further obligations regarding communication along the supply chain or notification may emerge from the analytical findings in the tested sample”

**Appendix A:**

Classification	Definition under 67/548/EEC and Regulation (EC) No. 1907/2006
Carcinogen Category 1:	Substances known to be carcinogenic to man. There is sufficient evidence to establish a causal association between human exposure to a substance and the development of cancer.
Carcinogen Category 2:	Substances which should be regarded as if they are carcinogenic to man. There is sufficient evidence to provide a strong presumption that human exposure to a substance may result in the development of cancer. Generally on the basis of: -appropriate long-term animal studies -other relevant information.
Mutagen Category 1:	Substances known to be mutagenic to man. There is sufficient evidence to establish a causal association between human exposure to a substance and heritable genetic damage.
Mutagen Category 2:	Substances which should be regarded as if they are mutagenic to man. There is sufficient evidence to provide a strong presumption that human exposure to the substance may result in the development of heritable genetic damage, generally on the basis of: – appropriate animal studies – other relevant information.
Toxic to Reproduction Category 1:	Substances known to impair fertility in humans. There is sufficient evidence to establish a causal relationship between human exposure to the substance and impaired fertility. Substances known to cause developmental toxicity in humans. There is sufficient evidence to establish a causal relationship between human exposure to the substance and subsequent development toxic effects in the progeny.
Toxic to Reproduction Category 2:	Substances which should be regarded as if they impair fertility in humans. There is sufficient evidence to provide a strong presumption that human exposure to the substance may result in impaired fertility on the basis of: – clear evidence in animal studies of impaired fertility in the absence of toxic effects, or, evidence of impaired fertility occurring at around the same dose levels as other toxic effects but which is not a secondary nonspecific consequence of the other toxic effects – other relevant information. Substances which should be regarded as if they cause development toxicity to humans. There is sufficient evidence to provide a strong presumption that human exposure to the substance may result in developmental toxicity, generally on the basis of: – clear results in appropriate animal studies where effects have been observed in the absence of signs of marked maternal toxicity, or at around the same dose levels as other toxic effects but which are not a secondary non-specific consequence of the other toxic effects, – Other relevant information.
PBT & vPvB	Substances which are persistent, bioaccumulative and toxic (PBT) or very persistent and very bioaccumulative (vPvB) pose a particular challenge to the chemicals safety management. For these substances a “safe” concentration in the environment cannot be established with sufficient reliability.
